DIGIMONDO 

niota

SIMPLY CONNECT TO
ANYTHING

DIGIMONDO 

EASY TO CONNECT WITH ALL SENSORS & SYSTEMS

IIOT REQUIRES MORE THAN ONLY A COMMUNICATION TECHNOLOGY

niota enables **Connection** and **Integration** of various IIoT Solutions.

niota **collects, bundles** and **normalises data streams** from LoRaWAN, Sigfox, NB-IoT, 3G, 4G, 5G, classical M2M and many different Systems. Automatic. Secure. Simple.

You can easily evaluate and visualize the data in niota. This will empower businesses and cities to find new solutions and sources of revenue.

CONNECT

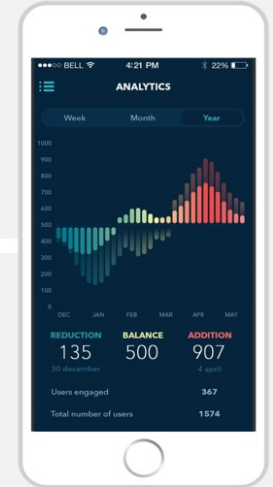

Receive, normalize and store data from various sources. Data forwarded to Interfaced systems.

PROCESS

Integrity Bots check the quality and quantity of the data streams. Data is bundled and forwarded to target systems.

VISUALIZE

The IIoT service builder lets users configure dashboards, visualizations and even smartphone apps without deep programming knowledge. Data from different sources (e.g. LoRaWAN, Sigfox, or NB-IoT, etc.) can be combined and provided with complex application logic.

YOUR ADVANTAGE

- Create **Sustainable** IIoT applications by bundling and normalizing the data of LoRaWAN, Sigfox, NB-IoT and many more
- **Independent** of Service Providers in creation of applications and graphics.
- **Quick response time** by configuring event-driven alarms.
- Simple **Integration** to existing systems such as AWS, SAP HANA, SAP IS-U, MS Azure, IBM Bluemix and many more.
